Big Bird is following you...

We live in a time when every person wants the world to see, read and know about his everyday life. In this time our mobile phone is our most personal and intimate object.

Our mobile phone can tell all about us. Our location and motion, our acquaintances, who we talk to and when, our schedule and personal preferences. If only phones could talk...

Big Bird uses the mobile phone's sensors and stored information to learn about the user's activities, habits and thoughts. It then shares this information to the world.

Big Bird distinguishes one activity from another using the Perceptron classification algorithm. Then, it predicts the user's "Tweet moments"* and publishes them via social networks:
